Allowable Subject Matter

2. Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance: the closest prior art of Barthel et al. (U.S. 6,731,800) provides for a method for compressing scanned colored and gray-scaled documents, by means of representation of the document in three planes _foreground image, background image and mask image, further regions such as text and graphic elements are assigned to the foreground image, the text background and the images of the background image and the result of this segmenting is filed in the binary mask image. See the summery of the invention. The prior art of Barthel failed to teach or suggest for **determining an initial compressed output data segment that contains one segment of a compressed output data set for the beginning of the image data set based upon a constant value contained within each pixel of the single intensity color plane; determining a middle compressed data segment that contains one middle data segment that is**

replicated to produce a middle compressed output data set for the compressed output data set, wherein the middle compressed output data set comprises the compressed output for the middle section of the image data set and the middle compressed data set is generated by repeating the middle compressed data segment. As cited in independent claims 1,5 and 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
